A horizontal number line with arrows at both ends. A vertical tick mark is at the center. A point is marked on the line to the left of the center with a small black square. To the right of this point, the text "0.69 (0.012, 46.)" is written.

Figure 1: A plot of the logarithm of the number of iterations versus the number of iterations for the 1D problem. The x-axis is labeled 'Iterations' and ranges from 0 to 1.7e+08. The y-axis is labeled 'log10(Iterations)' and ranges from 0.38 to 1.7. Four data series are shown: '1.7e+08 (1.7e-05, 1.7e+08)' (solid line with circles), '1.4e+05 (0.43, 1.1e+02)' (solid line with squares), '0.38 (0.0026, 56.)' (dotted line with circles), and '0.63 (0.0053, 94.)' (solid line with squares). The plot shows that the number of iterations required to reach a certain accuracy decreases as the number of iterations increases.
